GERMAN ECONOMY OVERCOMES SLOWDOWN ONLY GRADUALLY

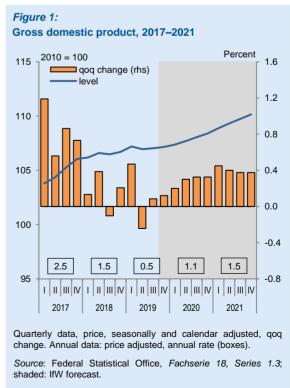

Jens Boysen-Hogrefe, Salomon Fiedler, Dominik Groll, Nils Jannsen, Stefan Kooths, Saskia Mösle, and Ulrich Stolzenburg

The German economy is recovering only gradually. After a weak summer half-year, gross domestic product will hardly do more than stagnate in the final quarter of this year. Economic activity still provides two contrasting pictures. The main reason for the ongoing downturn, which began last year, is the significant decline in industrial production. This has been caused mainly by the high levels of economic uncertainty weighing on global investment which has had a particularly negative impact on the German economy due to its specialization in the production of capital goods. By now, the investment climate has deteriorated in Germany as well. As a result, companies are likely to significantly reduce their investment activity in the coming quarters. Weak industrial activity is also increasingly affecting the industry-related service sectors. In contrast, the consumer-related service sectors continue to expand. Despite the fact that employment growth has slowed considerably, disposable income of private households continues to rise significantly. In addition to wage increases that continue to be quite strong, numerous income-increasing fiscal policy measures are contributing to this development. The construction industry is still booming, not least due to the continuing favorable financing conditions. Over the course of the coming year, overall production should gradually pick up again supported by the slight recovery in the global economy. At 1.1 percent, GDP growth in 2020 is likely to be much higher than in the current year, where an increase by 0.5 percent is expected. However, the higher growth rate is primarily due to the higher number of working days. The surpluses of public budgets will decline significantly: While spending will continue to expand strongly, revenues will be noticeably burdened by the weak economy. After the record surplus of over 60 billion euros in 2018, we expect a slight deficit in 2021.

Consumer price inflation continues to be moderate. Over the past three months, overall inflation has been quite weak; according to preliminary figures, the consumer price index in November stood just 1.1 percent above its value one year ago. This was mainly due to the weakness of energy and food prices. Excluding these two volatile components, inflation was 1.6 percent. Thus, the underlying dynamics of consumer prices are un-

changed. Overall, we anticipate an inflation rate of 1.4 percent for the current year, followed by 1.5 and 1.6 percent in 2020 and 2021, respectively.

There will be no interest rate hikes by the ECB throughout the forecast period. In September, the ECB announced a set of new measures in an attempt to provide additional monetary accommodation. These include a reduction of the deposit rate to -0.5 percent, restarting outright net asset purchases at a pace of €20 bn per month, extending the

maturity of future TLTRO tranches to two years, and adjusting the forward guidance in a way that pushes an end to the asset purchases as well as interest rate hikes further into the future. The ECB also introduced a two-tier system which exempts a certain share of banks' excess reserves from negative interest rates. Against this background, financing conditions should remain very favorable in the coming years.

German foreign trade defies the slowdown in global industrial production temporarily. In the third quarter, exports increased noticeably but did not quite compensate for the decline in the previous quarter. In the current quarter, they are set to expand at a similar pace, as indicated by the exports of goods in October. Other leading indicators show a mixed picture: while there are cautious signs of stabilization, they are still well below their long-run averages. Against this backdrop, exports are unlikely to maintain the rather high pace of the second half of the year at the beginning of 2020. Over the remaining forecast horizon, exports will therefore expand moderately and will only gradually pick up speed again, in line with the muted but ongoing expansion in German export markets and accelerating global trade. German imports remained largely unchanged for the second consecutive quarter. For the fourth quarter, monthly data on goods imports and higher export activity suggest a pick-up despite the weak domestic economy. Over the remaining forecast horizon, imports will initially expand at low rates—albeit more strongly than exports—due to the weak dynamics of investment and exports, and will gain momentum only slowly.

Private consumption remains robust despite a weaker labor market. We expect gross wages and salaries to expand in the next two years by 3.4 percent (2020) and 3.2 percent (2021), respectively, i.e. considerably lower rates than in the current year (4.5 percent) due to the weaker labor market. However, several income-increasing fiscal policy measures will stimulate disposable income of private households. For example, the partial abolition of the "Solidaritätszuschlag" in 2021 will increase disposable income by about 0.5 percent. Moreover, property and entrepreneurial income of private households is set to slightly increase in the next two years due to the stabilizing economy, after a decline of about 2 percent in this year. Overall, disposable income of private households is expected to increase by 2.8 percent in the next year and 3.3 percent in 2021 after having increased by 3.1 percent in this year. Given that inflation and the savings rate will remain roughly at the level of this year, private consumption will increase by 1.5 percent both in this year and next year, followed by 1.7 percent in 2021.

Firms will temporarily reduce investment activities. The investment climate has deteriorated noticeably in recent quarters. In addition to the gloomy sales prospects in Germany and abroad, the continuously high level of global economic uncertainty is also a contributing factor. Already in the second quarter of this year, firms significantly reduced their capital expenditure on machinery and equipment. In the third quarter, anticipation effects resulting from the second stage of the Worldwide Harmonized Light Vehicle Test Procedure (WLTP 2) for passenger cars, which came into effect in September, may have contributed to the slight increase. The development in private investment was overshadowed in the summer half-year by the large fluctuations in public investment in machinery and equipment (which accounted for around 7 percent of total investment in plant and equipment in 2018), with the result that overall investment in machinery and equipment fell sharply in the third quarter after a slight increase in the second quarter. For the current quarter, leading indicators, such as domestic sales of capital goods manufacturers in October, point to a sharp decline in business investment. The decline in domestic incoming orders suggests that the weakness will stretch into the coming year. Against this backdrop, investment in machinery and equipment is expected to decline by about

3 percent in next year after a slight increase this year. For construction investments and other investments by firms, we expect them to follow this trend, albeit with less accentuation as usual.

Labor costs have not been as high relative to labor productivity and prices since the early 2000s. Wage growth is expected to weaken slightly. Current collective agreements indicate a deceleration of negotiated wages and salaries in 2020. Moreover, in light of the current recession in the manufacturing sector, the upcoming negotiations in the important metal and electrical industry in spring are likely to fix lower wage increases, as has already been the case recently in the chemical industry. We expect total negotiated wages and salaries to rise by 2.5 percent and 2.3 percent in 2020 and 2021, respectively, after an increase of 3.0 percent this year. Gross wages and salaries per employee are expected to rise a bit faster, as labor market tightness remains an issue in large parts of the economy despite the economic downturn. We forecast wage increases of 2.8 percent and 2.6 percent in 2020 and 2021. Although wage growth weakens slightly, labor costs are no longer stimulating labor demand. As labor productivity has stagnated in the past two years, unit labor costs have increased considerably faster than before, and faster than domestic prices. Real unit labor costs have now reached a level last seen at the beginning of the 2000s. As a result, labor demand will turn out to be fairly weaker than in much of the recent past.

Employment continues to rise, albeit at a much slower pace than before. Employment growth decelerated considerably at the beginning of 2019, but seems to have stabilized in recent months. The number of vacancies has continued to fall, but remains at a fairly high level. While firms in the manufacturing sector plan to reduce their staff in upcoming months, firms in the construction sector and in the service sector still plan to increase their workforce. We expect employment to rise further in 2020 and 2021, although at a much slower pace than in recent years. On the one hand, real unit labor costs no longer stimulate labor demand. On the other hand, labor supply shortages are set to intensify due to the ageing of the population.

The fiscal surplus declined in 2019 due to the expansionary stance of fiscal policy and slowing revenues. The recession in the manufacturing sector has put corporate tax revenues under pressure. However, the dampening effect of the downswing has not been very severe yet due to still robust wage and employment growth that led to substantially higher social security contributions and wage tax revenues. In sum, revenues increased at a smaller pace than in the record year 2018. On the expenditure side, public investment and consumption have increased strongly driven by policy measures of the federal government and by past surpluses at the level of municipalities and federal states. Further, pension payments increase rapidly due to the good labour market conditions of the previous years and due to the extended consideration of times in parental leave. In sum, the surplus will shrink, but will remain at a relatively high level.

In 2020 and 2021, fiscal policy will remain expansionary and the surplus vanishes. Expenditures will expand at a similar rate as in the previous year. Fiscal policy will take additional measures, e.g. introduction of a basic pension scheme and expenditures in the field of climate policy. Other measures already in place will trigger additional expenditures as well. Since the economic downturn will affect wages, revenues from social security contributions will expand with lower rates and the growth of tax revenues will stay subdued. However, in 2020 the surplus will still be sizeable. In 2021 the "Solidaritätszuschlag" on income taxes will be partially abolished leading to lower revenues of about €10 bn. The fiscal consequences of the economic downturn and the impact of fiscal policy measures will lead to a further deterioration of the budget balance. For 2021, we expect a more or less balanced budget. This also holds for the structural balance.

Volumes, seasonally and working-day adjusted. Change on previous quarter in percent; change in inventories, net exports: Lundberg component (contribution to GDP growth); employment, unemployment: seasonally adjusted, 1,000 persons; unemployment: as defined by the Federal Employment Agency (BA).

Source: Federal Statistical Office, Fachserie 18, Series 1.3; Federal Employment Agency, Monthly Bulletin; shaded: IfW forecast.

GDP: volumes, change over previous year. Point forecasts: orange lines. Forecast intervalls greay shaded areas with confidence levels of 33, 66, and 95 percent. Confidence levels calculated based on historical forecast errors of the Kiel Institute in the fourth quarter 1994–2018.

Source: Own calculations.

Annual data; price-adjusted, growth contribution of each expenditure component adjusted by import content; import content is estimated based on input/output tables; see Kooths and Stolzenburg (2018).
